JHON CESAR D. PABLO

Full Stack Developer | Senior Front-End Developer | Software Engineer
Parañaque City, Metro Manila, PH • +63 909 0225 288 • jhncspbl@gmail.com
Portfolio: jhonpabz.vercel.app • GitHub: github.com/jhonpabz

PROFESSIONAL SUMMARY

Full Stack Developer with 7+ years of experience and strong expertise in frontend engineering, specializing in React, TypeScript, and modern web technologies. Experienced in structured development environments with dedicated frontend and backend teams, following scalable architecture and coding best practices, as well as independently owning projects end-to-end in lean teams. Skilled in building maintainable applications, mentoring developers, conducting code reviews, and delivering production-ready solutions using modern full-stack technologies.

TECHNICAL SKILLS

Front-End: React, Next.js, Vue.js, Nuxt.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, SASS, Tailwind CSS, Material UI, Ant Design, Styled Components, shadcn/ui, Bootstrap, Vite
State & Data: Redux, Redux Toolkit, Zustand, Jotai, React Query, React Hook Form, WebSocket, useContext, Socket.IO
Testing & Tools: Jest, React Testing Library, Git, GitHub, GitLab, Bitbucket, Jenkins, Docker, Jira, Confluence, Figma, Postman
Back-End & Database: Node.js, Express.js, Socket.IO, PostgreSQL, Redis, MongoDB, PHP, Laravel, MySQL

PROFESSIONAL EXPERIENCE

Full Stack Developer | *Everlounge Inc.*
Jan 2025 – Present

- Full-Stack Development: Design, develop, maintain, and enhance web applications using Node.js, Express.js, React, TypeScript, PostgreSQL, Docker, and related technologies. Handle end-to-end development of Node.js-based projects, from requirements analysis and architecture through implementation, database integration, testing, and deployment.
- End-to-End Project Ownership: Independently lead and deliver projects of varying complexity, including full-scale applications, e-commerce platforms, and real-time chat applications. Take ownership of technical implementation and problem-solving with minimal supervision, particularly for projects built on the Node.js ecosystem.
- Frontend Engineering and Technical Leadership: Perform senior-level frontend development using React, TypeScript, JavaScript, and Tailwind CSS. Collaborate with PHP developers to implement features, integrate backend services, troubleshoot issues, and maintain high standards of frontend architecture, code quality, performance, and maintainability.
- PHP and Laravel Development: Maintain and enhance existing PHP and Laravel applications, implement code-level changes, troubleshoot issues, and collaborate with backend developers to deliver features across the application stack.
- Technical Mentorship and Code Quality: Mentor frontend developers in technical implementation, clean code practices, logical problem-solving, and user-focused development. Conduct code reviews, share technical knowledge, and promote maintainable, scalable, and consistent coding standards.
- AI-Assisted Development: Explore and introduce AI-assisted coding tools and workflows, promoting effective prompt engineering and practical AI integration to improve development productivity, code quality, and problem-solving efficiency.
- Cross-Functional Collaboration and Deployment: Work closely with backend, Ops/DevOps, UI/UX, and translation teams to deliver production-ready applications. Troubleshoot application issues, integrate services, and support development and deployment in Linux-based environments using tools such as Jumpserver.

Front-End Developer | *Fun J. Software Development Corp.*
April 2024 – Jan 2025

- Develop and maintain existing/new projects (React Web Admins, Vue Web app, H5 app, and Landing page) using React JS, Vue JS, Javascript, Typescript, Redux, HTML, CSS, SASS, Ant Design, Rest API's, WebSocket, Jenkins, etc.
- Create technical documentation of the apps.
- Migrate old platforms to new ones, create new features, and fix bugs (local, test/staging, and production). Build applications for production on different platforms.
- Collaborate with back-end engineers, project managers, and UI/UX designers.

Front-End Developer | *Philtech Info Services Inc.*
June 2023 – April 2024

- Develop, maintain, and test existing/new projects using Next JS, Nuxt JS, React JS, Vue JS, Typescript, Javascript, Redux, Redux Toolkit, Tailwind, HTML, CSS.
- Create the file structure of the project. Create reusable React components, and hooks, integrate RestAPIs, configure Redux/thunk, Next config, Middleware, etc.
- Share my knowledge with my co-developers about best practices in coding and how to write readable, maintainable, and optimized code.
- Create technical documentation.
- Review co-developers code and assist them if they have blockers/challenges.
- Created a chart on how the data will flow from API to Global State(Redux) and different components of the project. Implemented most of the features and created almost all reusable components in our Next.JS project.

Associate Software Engineer | *Fligno Software Philippines Inc.*
March 2022 – June 2023

- Design, develop, and test new and existing projects using the latest front-end technologies (React, Javascript, Typescript, Redux, Zustand, React Hook Form, Tailwind, Material UI, CSS, SASS, HTML, JEST, etc). Apply best practice development patterns and follow design briefs, Continuous Integration/Development, and maintenance of code.
- Collaborate with back-end engineers, project managers, and UI/UX designers to transform creative concepts into production realities for clients and stakeholders.

- Read confluence documentation about the project app features/requirements and add estimates. Create technical documentation of the app.
- Create own mock-up and discuss it with the client (if the feature is not available on Figma).
- Responsible for code review of co-developer (Front-end) to maintain code quality standards and also the approver of Pull requests.
- Participate in daily standup meetings and present/demo the progress and update every end of milestone/sprint to our clients (99% of our clients here are from Australia).
- Teach other developers a specific topic/language that is given to you. (Upskilling program by FLIGNO).

Web Designer & Developer | *Directories Philippines Corporation (DPC) & One Hundred Services Inc.*
August 2019 – February 2022

- Create and design a new website using the CMS platform (WIX) based on clients' branding and defined site objectives.
- Customize and revise existing websites using Powersite (CMS), HTML, CSS, SASS, Javascript, and JQuery.
- Edit/Enhance provided assets using Photoshop.
- Worked with the TechOps team supervisor for the creation of the Bel-Air Vehicle Registration System as a Developer. Wrote a thousand lines of Javascript code. Implemented CRUD functionality and data filtering.

EDUCATION

Bachelor of Science in Information Technology
Urdaneta City University • Urdaneta City, Pangasinan • 1st Sem 2016 – June 2019
Isabela State University • Cauayan City, Isabela • 1st & 2nd Sem 2015 – 2016

Bachelor of Science in Marine Engineering
Isabela College of Arts and Technology • Tagaran, Cauayan City, Isabela • 2013 – 2015

WORK PROJECTS HIGHLIGHTS

Live Chat Support System
- Role: Full Stack Developer
- Description: Built and tested a real-time live chat support system with agent dashboard, floating visitor widget, presence indicators, conversation management, automatic replies, and persistent chat history.
- Key Features: Real-time messaging (Socket.IO), agent availability & visitor presence, conversation search & previews, resolve conversations, welcome messages, announcement banners, visitor identification, and operational health checks.
- GitHub: https://github.com/jhonpabz/live-chat
- Tech Stack: Vite, React, TypeScript, Tailwind CSS, Node.js, Express, Socket.IO, PostgreSQL, Redis

Web Admin
- Role: Front End Developer
- Tech Stack: React JS, Typescript, useContext, UMI, Ant Design, Web Socket, Java, Springboot, Redis, Jenkins

Landing pages, H5 App, Web App
- Role: Front End Developer
- Tech Stack: HTML, React JS, Vue JS, Web Socket, Javascript, JQuery, CSS, Tailwind

Online Casino - React (Next.js) Version
- Role: Front End Developer
- Description: An Online Gaming Web Application where users can enjoy a wide variety of games that they can play/bet.
- Tech Stack: React Js, Next Js, Typescript, Redux/Redux Toolkit, Tailwind CSS, React Hook Form

Online Casino - Vue (Nuxt.js) Version
- Role: Front End Developer
- Description: An Online Gaming Web Application where users can enjoy a wide variety of games that they can play/bet.
- Tech Stack: Vue, Nuxtjs, Tailwind CSS

Estate Planning (changeps.com.au)
- Role: Front End Developer
- Description: A new feature of a big accounting software in Australia.
- Tech Stack: React Vite, React Query, Zustand, Material UI, React Hook Form, and Laravel.

Fligno HRIS
- Role: Front End Developer
- Description: A version 3 of existing HRIS of the company (Internal Project).
- Tech Stack: React, Redux, Context, React Query, Apex Charts, Material UI, Laravel

SPEK
- Role: Front End Developer
- Description: SPEK is a software designed to enhance the current reporting process between Landlords and Agents. Landlords will give their appointed agents access to their assets on the Spek Application. Agents will then be able to capture 'on-premise' occupier insights. These insights will be fed instantly into the SPEK platform.
- LinkedIn: https://www.linkedin.com/company/spekapp/
- Tech Stack: React, Redux Toolkit, Tailwind CSS, Laravel

Hyperspace Storage
- Role: Front End Developer
- Description: This app is like AirBNB for storages. I created the web admin part of the application.
- Tech Stack: React, Redux, Material UI, NodeJs, ExpressJs, and MongoDB
